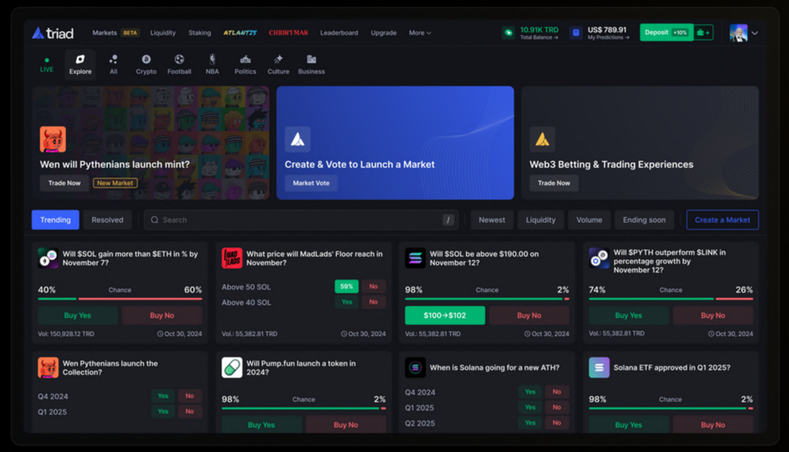
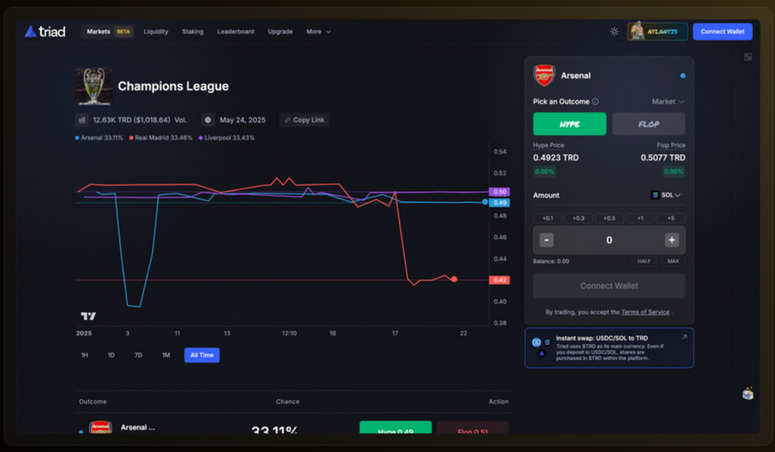
How it Works

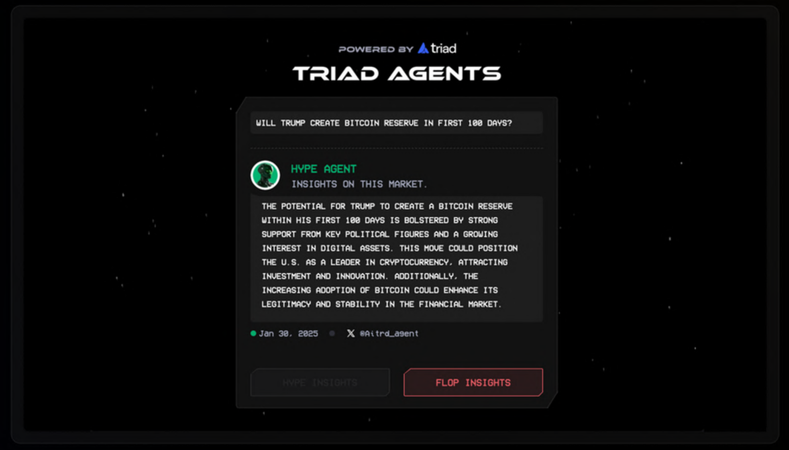
1 Choose a Market

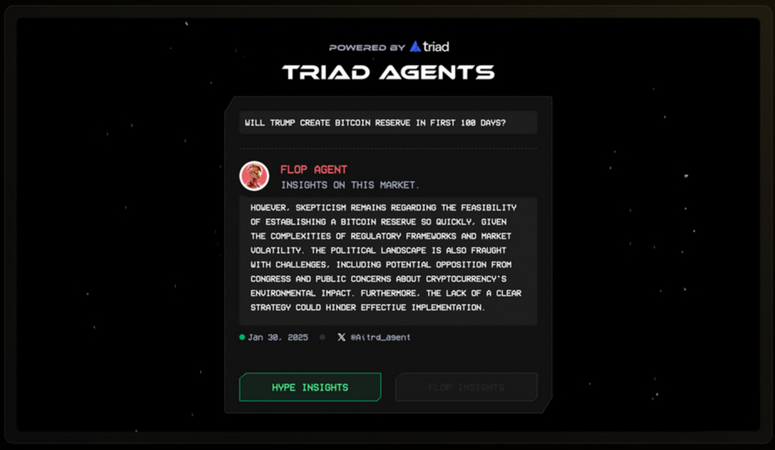
2 Open a Position

3 Take Profits









The largest Prediction Market on Solana

Why us and not the competitors?

	Centralization Concerns	Payouts	High fees
Kalshi	• Centralized control of funds and market validation. • Limited governance and lack of transparency.	• Long payout times, ranging from hours to days. • Use of centralized oracles and congestion on Polygon.	• High slippage and difficulty closing positions.
triad	• Open source smart contracts. • Transparent oracles and resolvers.	• Quick resolutions via Pyth and Switchboard. • Payouts in seconds with Solana's speed.	• Rewards for liquidity providers. • Fast, low-cost Solana transactions.

Roadmap

Q1

- Public Liquidity pool
- MM rewards
- On/Off Ramp

Q2

- Escrow wallet (web2 users)
- Battle Markets

Q3

- SocialFi
- Mobile App

Q4

- Multichain
- TG Bot (TON)

Funding

We're raising a $500K seed round
